

CLAIMS

1. An adjustable monitor support comprising:
 - a support structure configured to support a monitor; and
 - a plurality of jack screw assemblies configured to adjustably secure the monitor to the support structure.
2. The adjustable monitor support of claim 1, wherein each of the plurality of jack screw assemblies includes:
 - a jack stud configured to be fixedly inserted into a hole in the support structure;
 - a jack screw configured to be threaded onto the jack stud; and
 - a nut configured to be threaded onto the jack screw.
3. The adjustable monitor support of claim 2, wherein the monitor includes a retainer, having an aperture, configured to be disposed on the jack screw.
4. The adjustable monitor support of claim 3, wherein the nut is configured to be disposed on the jack screw and over the retainer.
5. The adjustable monitor support of claim 2, wherein the jack screw is configured to be rotated relative to the jack stud, wherein a position of the monitor changes with a change in position of the jack screw.
6. A gaming terminal comprising:
 - a monitor;
 - a housing; and
 - a plurality of jack screw assemblies configured to adjustably secure the monitor to the housing.

7. The gaming terminal of claim 6, wherein each of the plurality of jack screw assemblies includes
- a jack stud configured to be fixedly inserted into an aperture in the housing;
 - a jack screw configured to be threaded onto the jack stud; and
 - a nut configured to be threaded onto the jack screw.
8. The gaming terminal of claim 7, wherein the monitor includes at least one retainer having an aperture configured to accommodate the jack screw.
9. The gaming terminal of claim 7, wherein the jack screw is configured to be rotated until an evaluated position of the monitor matches a predetermined position of the monitor.
10. The gaming terminal of claim 9, wherein a value representing the predetermined position of the monitor matches a distance between a front door of the gaming terminal and the monitor, when the front door of the gaming terminal is in a closed position.
11. The gaming terminal of claim 10, wherein the value representing the predetermined position of the monitor is between 2 mm and 5 mm.
12. The gaming terminal of claim 7, wherein the jack screw has a pitch measuring .5 mm.
13. The gaming terminal of claim 7, further comprising:
- a processor, a printing device, and a currency distributing and collecting device disposed in the housing.

14. An adjustable monitor support comprising:
- a structure configured to support the monitor;
 - means for securing the monitor to the structure at at least one point, wherein the means is configured to be separately adjustable at each of the at least one points.
15. A gaming terminal, comprising:
- a monitor;
 - a housing; and
 - means for adjustably securing the monitor to the housing at at least one point, wherein the means is configured to be separately, mechanically adjustable at each of the at least one points.
16. A method for adjusting the position of a monitor, comprising:
- supporting a monitor via a support structure; and
 - adjustably securing the monitor to the support structure via a plurality of jack screw assemblies.
17. The method of claim 16, further comprising:
- fixedly inserting a jack stud into an aperture in the support structure;
 - threading a jack screw onto the jack stud; and
 - threading a nut onto the jack screw.
18. The method of claim 17, further comprising:
- placing a retainer onto the jack screw, wherein the retainer extends from the monitor and includes an aperture configured to accommodate the jack screw.

19. The method of claim 17, further comprising:

evaluating a position of the monitor relative to a predetermined position of the monitor; and

rotating at least one jack screw until the evaluated position of the monitor matches the predetermined position of the monitor.

20. A method for adjusting the position of a gaming terminal monitor comprising:

securing a monitor to a housing of the gaming terminal via at least one jack screw assembly; and

adjusting a position of the monitor via the at least one jack screw assembly.

21. The method of claim 20, further comprising:

fixedly inserting a jack stud into an aperture in the support structure;

threading a jack screw onto the jack stud; and

threading a nut onto the jack screw.

22. The method of claim 21, further comprising:

adjusting a position of the monitor after the monitor is secured to the housing by rotating the jack screw relative to the jack stud.

23. The method of claim 22, further comprising:

evaluating the position of the monitor relative to a predetermined position of the monitor; and

rotating at least one jack screw until the evaluated position of the monitor matches the predetermined position of the monitor.

24. The method of claim 23, wherein a value representing the predetermined position of the monitor is equal to the distance between a front door of the gaming terminal and the monitor, when the front door of the gaming terminal is in a closed position.

25. The method of claim 24, wherein value representing the predetermined position of the monitor is between 2 mm and 5 mm.

26. The method of claim 21, wherein the jack screw has a pitch measuring .5 mm.
